

POST & RAIL FARM BLACK it's just better

Let's get to the point... most fence paints are cheap & nasty... so we're doing it better!

A classic example of the effects of our NZ weather on standard fence paint.

Better Protection

FARM BLACK 100% NZ made for NZ conditions. It's been especially formulated with up to 50% MORE BLACK PIGMENT which means you get a sharper looking fences for longer and better coverage with each coat. We've also upped the GLOSS FACTOR and added FULL STRENGTH ANTI-MOULD additive to reduce MOULD and LICHEN uptake. UV inhibitors are standard in our paint and protect the life and colour of your fences.

We are also in the process of developing a better ANTI-CHEW paint for localized areas such as Stables Gates and surrounding fencing... Watch this space

Better Value

FARM BLACK isn't the cheapest out there, but it is best you can get and still remains competitively priced. It's difficult to make a better product while keeping the price realistic so we decided that if we couldn't make it better and remain competitive we wouldn't bother. Well, we did it!

Better Coverage

FARM BLACK goes further! The coverage on an average 4 post and rail fence per coat is approximately 3 meters per litre. That's roughly 600m of fence per 200 litre drum.

On new timber 2 coats are recommended with the first coat soaking in and giving exceptional coverage while the second coat will give a GLOSS finish even on rough sawn timber. The finished appearance is clean sharp jet black Post and Rail Fences.

For recoating, water blast with a anti-moulding agent, allow to dry then apply 1 coat for a jet black glossy finish. Dry and recoat times give up to 1 - 2 hours on warm fine days and allow up to 4 - 5 hours on cooler days.

FARM BLACK is formulated to be EASIER on the spray gear and cleans up with WATER. It is best applied with an airless spray unit but can also be rolled or brushed. We use lighter weight higher strength pigments so you get less settling. OPEN TOPPED DRUMS making stirring easier and cleaner.

This fence would look much better in Post & Rail Farm Black. Call us now!

Paint Tech Hamilton Limited

Our Environmental Systems

Paint Tech Paints are here in New Zealand, contain no added heavy metals; e.g. Pb, Hg, Cr, and no formaldehyde; it is benzene free and TDI content is less than 0.1% and are safe for both painters, and farm animals. Our manufacturing facility works towards minimizing energy consumption and waste from within the production process. In addition to this, we strive to minimise our impact on the environment year on year.

In summary, Paint Tech Paints rely on first class quality, hi-tech production formulation, scientific processing techniques, advanced production facilities for perfect function design, underpinned by competitive pricing.
